

The smart way to manage your business information!

LUMBERGEAR

Barcode Module

The barcode module integrates with the inventory management module of LUMBERGEAR and allows you to track inventory and costing information by any, or your entire product attributes such as thickness, grade, species, length, type, product id, status, and so on. The barcode module provides your warehouse staff with increased efficiency, air-tight inventory, accuracy, and time savings.

Increase Inventory Accuracy

Manual operations and data entry by your employees can introduce errors into the system and slow down searches with incorrect data. In manual operations, errors can typically occur in 1 in every 300 entries; these errors are reduced to 1 in every 3,000,000 entries in a barcode environment.

Reduce Paper

Bar-coding your inventory affords you the ability to spend less time going through stacks of paper and deciphering handwriting. All you have to simply point and click on the barcode you want to perform an action on and voila, you're all set.

Automate your Operations

You will achieve big time savings by automating your inventory procedures. Operations that used to take 5 minutes of data entry are now reduced to *how fast can you scan*.

Greater Speed and Efficiency with Real Time Updates

You will achieve greater efficiency with the barcode module of LUMBERGEAR because updates you make to inventory is real time, and is reflected immediately for all users to see.

Barcode your entire inventory with LUMBERGEAR

The benefits of bar-coding your entire inventory are too numerous to ignore. With the barcode add-on module of LUMBERGEAR you save a lot of time and ensure that information is entered properly by your employees.

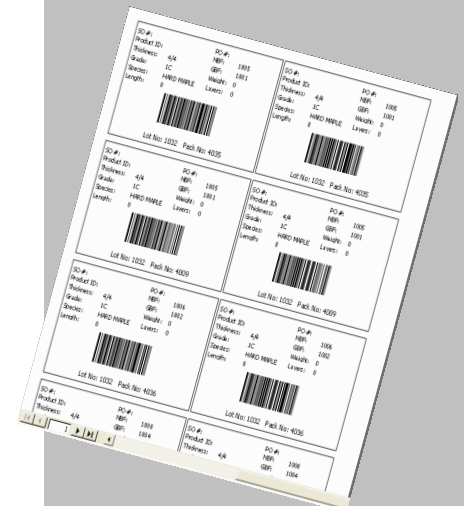

Barcode Overview

LUMBERGEAR reads barcodes by using standard barcode/handheld scanners/readers that have been thoroughly tested to give you the best result.

You will find out that the productivity of your warehouse will increase over 50 times because entering, relocating, and loading inventory will occur more accurately and efficiently.

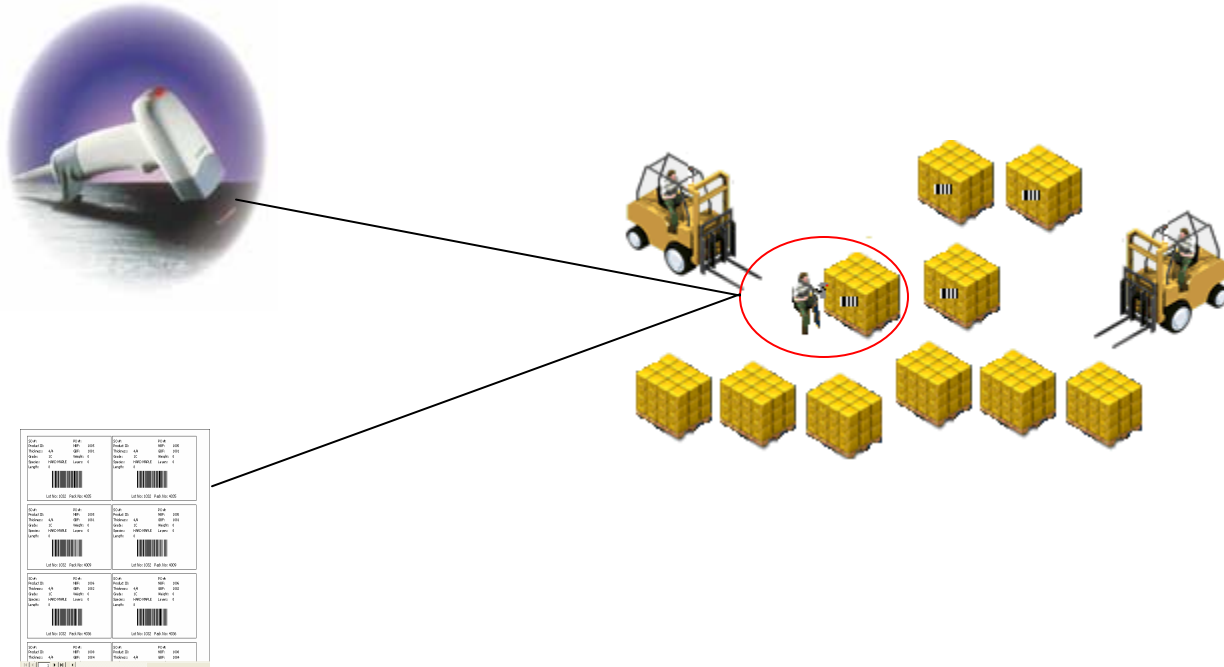

Real Time Updates

LUMBERGEAR immediately reflects updates in your warehouse inventory, and you don't have to wait until the end of day to upload your warehouse changes into your back office system.

The smart way to manage your business information!

LUMBERGEAR

Barcode Scan Highlights

Description

- Easy Tracking and Sorting ✓ Easily find and sort information by location and all product attributes. You can also track inventory in route.
