

## Inventory Management and Costing

### Key Features

#### Hardwoods and Softwoods

Lumbergear can handle hardwood lumber, softwoods, dimensional lumber, green and kiln dried lumber, treated lumber, and random lengths and widths.

#### Maintenance Inventory Costs

Easily control inventory costs, and additional costs such as warehouse storage, grading, milling, freight and drying.

#### Easy Tracking

Track and sort inventory by any or all product attributes such as product code, species, thickness, location, grades, and kiln.

#### Batch Operations

Lumbergear makes it easy to perform various operations on multiple inventories. If you want to change the manufacturing status of 100 inventory items, no problem, just point and click and Lumbergear handles the rest.

#### Analysis

View a graphical representation of your inventory, and see how much footage you have in a graphical format.

#### LumberCell Wireless Handhelds

LumberCell is the mobile handheld companion to Lumbergear. LumberCell allows mobile workers the ability to search for real-time inventory on the road directly from their handheld.

#### Smart Features

Footage is calculated automatically in Lumbergear. You also have the flexibility to manually enter footage you want

#### Reporting

You have numerous reporting options to help you better handle your inventory requirements. Inventory reports feature powerful search mechanisms that allow you to quickly find your information.

#### Inventory Control

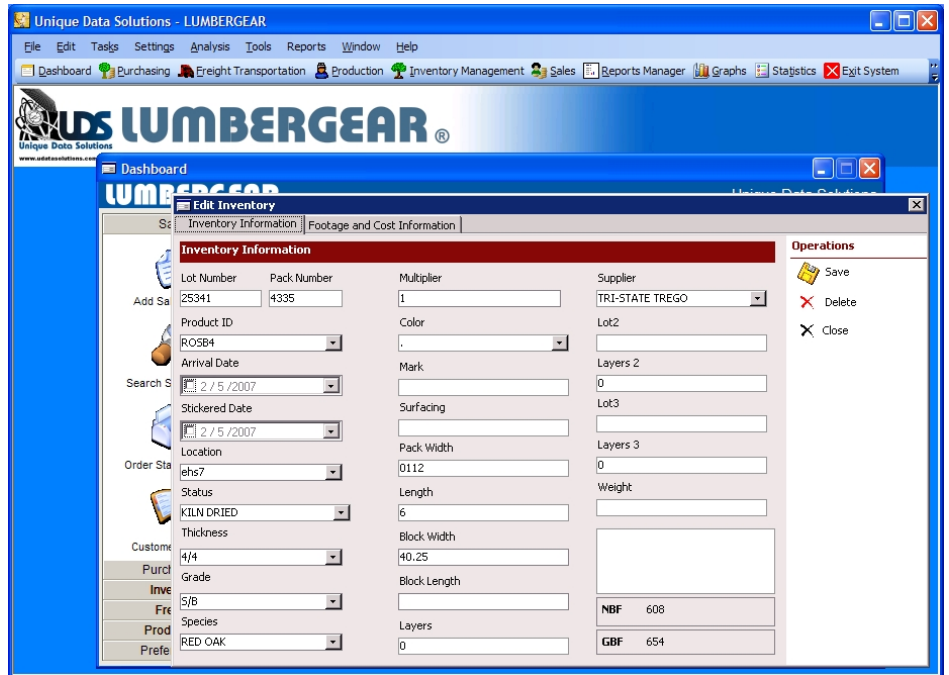

You have full control of your inventory. The inventory module is tightly integrated with other modules such as sales, purchasing, freight, and production for seamless integration.

#### Company Address

Unique Data Solutions LLC  
2137 Jackson Street,  
La Crosse, Wisconsin 54601

#### Email Address

sales@udasolutions.com

The inventory management module in Lumbergear is rich and powerful, and was designed for ease of use, combined with a powerful search mechanism, to ensure that you can find the information you want in a timely fashion.

Lumbergear makes it easy for you to track your wood and its associated costs by almost any criteria. You can quickly identify lumber as it goes through the many production stages, and view resulting costs. You can track the actual purchased cost of lumber as well as costs associated with drying, freight, warehouse, milling, grading, and other costs. Transferring inventory between locations is a snap, and you can store inventory in multiple units of measure.

#### Time Saving Features

You can quickly tally and enter inventory into the system with no problem. You can also receive inventory directly from purchase orders with associated lumber, and freight costs. Lumbergear also makes it easy for you to merge separate lumber packs together with the click of a button. If you need to perform additional analysis on your inventory, you have the option of exporting the information to Microsoft Excel.

#### Easy Report Generation

With over 20 useful inventory reports, you will find it easy to track inventory and costing information by all product attributes, regardless of location.

#### Barcoding Inventory

Barcode your entire inventory and track inventory faster with increased speed and accuracy.

## Feature Highlights

## Description

### Inventory Management

- Support for multiple types of hardwood and softwood products
 ✓ Lumbergear supports multiple types of hardwood and softwood products such as green and kiln dried lumber, remanufactured lumber, hardwoods in multiple grades, species, lengths, and widths.
- Track Inventory Costs
 ✓ Easily find and sort inventory by location and all product attributes. Lumbergear also allows you to track all related costs associated with your products. Easily maintain inventory from the inventory management module.
- Inventory Audit and Reconciliation
 ✓ Quickly perform inventory audits and physical counts at regular intervals for reconciling inventory information. You can also perform end of month sales audit and reconcile with inventory.
- Capture Costs
 ✓ Stay on top of inventory costs such as purchased cost of inventory, drying cost, freight cost, milling cost, grading cost, and other costs.
- Batch Processing
 ✓ The powerful batch processing makes it possible for you to perform simultaneous updates on inventory. If you need to make changes to 1 item or 100 items at the same time, no problem!
- Barcoding
 ✓ Barcode your entire inventory and track inventory faster with increased speed and accuracy. You can also print barcode tags with real-time information for any item in stock.
- Tagging
 ✓ You have immediate access to print tags for incoming and outgoing lumber. Lumbergear tags maintain up to date inventory information.
- Powerful Search Mechanism
 ✓ The powerful search mechanism makes it possible for you to sift through inventory very quickly. You can perform different number of search combinations, to get the information you need.
- Integration with Sales
 ✓ As you create sales order, you can easily assign lumber to specific orders to avoid selling products that have previously been sold.
- Wireless Inventory Handheld
 ✓ LumberCell Mobile software allows your mobile workforce to search for real-time inventory on the road directly from their handhelds.
- Smart Inventory Reports
 ✓ As you navigate through the color coded smart inventory reports, it is easy to spot inventory that is in stock for current orders, and those that cannot satisfy current customer orders.
- Export to Microsoft Excel
 ✓ With the click of a button you can export filtered inventory results to Microsoft Excel for further analysis.
- Reporting
 ✓ With over 20 useful inventory reports, you will find it easy to track inventory and costing information on all product attributes regardless of location. Inventory Reports also feature a powerful search mechanism that allows you to quickly find your information.
- Multiple units of measure
 ✓ Track lumber cost by net tally, gross tally, and others.
- Graphical Analysis
 ✓ Use the graphs viewer to see how much footage you have in any location in a graphical format.
- QuickView (Inventory)
 ✓ Use QuickView to export all your inventory information including end of month sales and inventory information to Microsoft Excel, Word, HTML, or text file.
